Item Analysis

Bracken Basic Concept Scale—Third Edition: Receptive assesses children's knowledge of important basic concepts. The following Item Analysis table identifies the concepts that Jane responded to correctly and those that she did not respond to correctly.

M = The child probably understands the concept in most situations (Mastered).

NM = The child probably does not understand the concept in most situations (Not Mastered).

Teach the concepts in a variety of natural situations such as playtime or mealtime.

Notes:

Jane was not given the Colors subtest because her records indicate that she is color-blind. Jane's performance on the subtest would not be a true indication of how well she understands color concepts. So, Jane's reported score on the Colors subtest is an expectancy score. The expectancy score represents the average performance on the Colors subtest for children in the sample population based on their performance on Subtests 2–5.

Please be advised that this is a color-blind examinee and scores should be evaluated accordingly.

Summary:

This report lists the subtests that Jane was given and scores that reflect her performance. The Item Analysis lists the concepts that Jane has mastered and those that she has not mastered. You can use the Item Analysis to decide which concepts you may want to work on with Jane.

Please discuss any questions or concerns you have with J Examiner.
