## ASSIST™ Software Frequently Asked Questions General

### **What version of the Java Runtime Environment do I need to run ASSIST software on Microsoft Vista?**

The Java Runtime Environment (JRE) version 5 or higher is required to run an ASSIST on Vista. The ASSIST software will also run using version 1.4.2 of the JRE, but Vista will need to be configured to run in Windows Classic mode.

**Note:** Your ASSIST software must be at a Vista compatible level. See your software CD insert sleeve to determine Vista compatibility.
