

Basic Achievement Skills Inventory

Student Summary Report: BASI Level 4
Achilles N. Bardos, PhD

Student: Sample, Matt
Student ID: 000000061
Birth Date: 08/25/1985
Grade: 12

Teacher: Sample, Teacher
Class/Group:
School: Aces High
District Code:

Timed: Yes
ESL Student:
Accommodations:
Test Date: 12/04/2002
Report Date: 07/01/2008
Form: A
Norms: Fall / 12th Grade

Composite or Subtest	SS	Confidence Interval	%ile	GSV	GE	AE
Reading Total	116	108-122	86	117		
Vocabulary	112	102-120	79	118	12.9	18-0

Math Computation	109	98-118	73	112	12.9	18-0
Math Application	109	96-120	73	108	12.9	18-0

Matt's BASI results are presented in the tables on this page. *Standard scores* compare Matt's performance with that of other 12th grade students in a national sample. *Confidence intervals* indicate the range of standard scores that is likely to include Matt's true score. *Percentile (%ile) scores* indicate what percentage of the norm group Matt scored as well as or better than. The *GSV score* is a measure of raw performance on a particular subtest or composite. The GSV scale for a subtest or composite is consistent across BASI forms and levels, making GSV scores useful for measuring change over time. GSV scores from different subtests or composites cannot be compared.

The tables below present Matt's results for the various achievement areas included in each of the six BASI subtests. The results shown are percentage correct (PC) and a rating of his performance relative to that of other examinees. These results identify the areas in which he excels and those in which he might need help. They can also help track Matt's progress if he takes the BASI test again.

SS = Standard Score (mean = 100, SD = 15) **%ile** = Percentile Rank **GSV** = Growth Scale Value **GE** = Grade Equivalent **AE** = Age Equivalent **PC** = Percentage Correct

Achievement Area	PC	Performance

%tile = Percentile Rank

GSV = Growth Scale Value

This report shows how the student's BASI scores compare to the scores of a census-matched national sample at the student's grade level and to two samples of college students: those in their first year at a two-year community college, and those in their first year at a four-year college or university.

The *percentile (%tile) ranks*, shown in the table at the left, indicate what percentage of the national sample the student scored as well as or better than. The table also shows the student's *GSV (Growth Scale Value)* scores for the BASI composites and subtests and the corresponding GSV scores for first-year community college students and first-year college/university students. In addition to the college students' average GSV score, the range of the middle 50% of scores is shown.

The box plot below illustrates these scores. The box represents the range of the middle 50% of scores for college students. The horizontal line to the right of the box shows the range of the upper 25% of scores, and the horizontal line to the left of the box shows the range of the lower 25% of scores. The diamond in each plot depicts the student's GSV score in comparison to the college students' scores.

The GSV is a yardstick that represents levels of performance on a particular BASI subtest or composite. It enables comparison of a subtest score from one BASI level to another to accurately measure growth or--as in this report--to compare an individual's score to others' scores. It's important to remember that, unlike a percentile rank, the GSV score does not have any meaning in and of itself; it is a tool for comparison.
