George's BASI results are presented in the tables on this page. For each composite and subtest, the table at the left shows the percentage of questions George answered correctly (PC) and indicates how his performance compares to that of the comparison (norm) group selected by the test administrator. In addition, the estimated grade-equivalent (GE) score for his performance is presented for the subtests.

For example, George answered 68% of the Vocabulary questions correctly. This performance is approximately equivalent to that of an average 12th grade student. This score is Above Average relative to the norm group's scores.

The tables below show George's performance in the various achievement areas that make up each of the six BASI subtests. The results presented are the percentage of items he answered correctly (PC) and a rating of how his performance compares to that of the norm group. These results can be used to identify areas in which George excels and those in which he may need help. They can also be used to track his progress if he takes the BASI test again.
