Early Years Spanish Supplement

Colin D. Elliott, PhD

DAS™ -II

Differential Ability Scales, Second Edition

Colin D. Elliott, PhD

OVERVIEW

Cognitive assessment battery that is especially appropriate for children from monolingual Spanish-speaking homes.

Age Range: 2:6–6:11

Publication Date: 2012

Qualification Level: C

Completion Time: Core battery 45–60 minutes; Diagnostic subtests 30 minutes

Administration: Paper-and-pencil

Scores/Interpretation: Standard scores and percentiles by age

Scoring Options: DAS-II Scoring Assistant® or hand scoring

RTI Tier: 3

Accurately assess Spanish-speaking children in their primary language.

Obtain a more accurate picture of Spanish-speaking children's cognitive strengths and needs by assessing them in their primary language. This child-friendly instrument for ages 2:6–6:11 supplements the DAS-II Complete Kit to provide an in-depth analysis of learning abilities across a wide range of domains.

Development Information

During the translation and adaptation of the DAS-II Early Years Spanish Supplement, professionals representing each of the following countries (as well as specific geographic areas of the United States) were involved to ensure that any cultural or language issues that might affect the assessment of a child from that specific culture were addressed: Argentina, Chile, Colombia, Costa Rica, Cuba, El Salvador, Mexico, Nicaragua, Panama, Peru, Puerto Rico, Spain, and Venezuela.

Administration Assistance

When a bilingual psychologist is unavailable, the Interpreter's Manual included with the DAS-II Spanish Supplement provides information that is key to effectively collaborating with an interpreter to administer the battery. In addition to training suggestions, the Administration Manual includes the Spanish instructions that will be read by the interpreter so that the examiner can follow along during the administration.

Scoring

The raw scores achieved using the DAS-II Early Years Spanish Supplement are equated to the English raw scores for the DAS-II and then converted to a weighted ability score.

DAS-II Complete Kit

MATERIALS & PRICING

Identify a child's strengths and challenges to develop more effective intervention strategies.

The DAS-II provides an in-depth analysis of children's learning abilities across a wide range of domains. This child-friendly instrument spans all school ages (2:6–7:11) and provides school readiness information and other diagnostics with ability estimates.

Users & Applications

- Determine a learning disability or intellectual disability
- Develop appropriate intervention strategies
- Assess children for gifted and talented eligibility

Features & Benefits

- Representation of all major CHC broad abilities in the subtests and composites
- Useful with a wide range of children, including those who have suspected intellectual disabilities as well as those who have severe disabilities and are low-functioning
- Flexible, customizable administration based on the child's needs
