

Telepractice *How-to* Training Options for Occupational Therapists

OTs are forever innovating and finding solutions to everyday challenges, and always willing to go the extra mile to share advice and resources. We're receiving great questions and seeing interesting conversations on listservs and social media about OT telehealth experts helping fellow clinicians see this service delivery model in action and learn how to use technology options—often for free! We've made a listing for resources and formal training options that we know about to help clinicians find resources relevant for them, but don't hesitate to ask in your social and professional groups for other colleagues willing to share their expertise. We're all in this together!
